

Superior and cost effective...

Insist on the superior and cost effective Easy Automation System.

Ideal for:

- Very large commercial sites and property managers e.g. schools, reception venues, councils, apartments.
- Commercial growers e.g. viticulturists, mushroom farmers, flower growers, hydroponics, aeroponics.
- The home garden or bonsai enthusiast with just a few zones.

Adaptable

- Expandable – using one controller, one cable.
- One to dozens of controls areas (irrigation, lighting, mains devices)
- Optional add on - sensors, mains controllers.

Expanding conventional systems is frustrating and expensive; most often requiring a new additional controller & laying new cabling with associated re-digging.

The Automation System is Australian owned and developed with assistance from the Australian Federal Government's Research & Development financial assistance program and uses technology installed in over 36 million control devices worldwide.

Future proofed by being based on computer control. It's no problem if your internet is down – you still stay in control on site.

Like all major software products, regular updates provide users with continual improvements and additional new features.

Email for free installation & configuration support.

The features are endless!

Full multi-user on-site & off site.

WIFI and internet optional. No application app required.

Only one simple low voltage cable.

Branch where required

One to dozens of independent controlled areas.

Expansion - simpler whenever, wherever

Installation & maintenance - easier, simpler, faster

Irrigation, lighting & more - direct connection for LED 12V garden lighting (no electrician required).
Control mains powered devices – lights, ponds, fountain.

Series control - one area ON after another.

Overlap watering minimizing “water hammer”.

Group Control - all areas (e.g. lighting) ON as one.

Simple or complex scheduling - use local sunrise, solar noon and sunset.

Wet & Wait Cycling - avoid inadequate watering and expensive runoff use for misting (eg fernery).

Durations accurate to the second.

Pumps – automatically turned on and off as required.

Diverter automatically turned on and off as required

Purge valves automatically turned on and off as required - flush hot water or chemicals

The Easy Automation system uses Echelon technology installed in over 36 million devices worldwide.

Easy Automation

Control Irrigation, lighting & more

- One controller, one cable
- Optional touch screen
- No confusing knobs and dials
- Less digging, piping and labour
- Expand to dozens of areas (“zones”)
- Control garden lighting and more

Easy Automation System

for Residential, Commercial, Rural

Avoid the limiting pitfalls NO more...

- Confusing knobs & dials
- Irrigation only control
- Limited number of watering areas (zones)
- Limited number of schedules
- Limited control features
- Limited expansion with multiwire irrigation cabling
- Limited access methods and limited number of users

Multi-wire irrigation systems constrain the number of watering areas because of both the controller limits and the wiring limits. Most controllers have a fixed limit to the number of zones (sometimes called stations). Irrigation cable has a fixed number of internal wires - each wire controls only one zone.

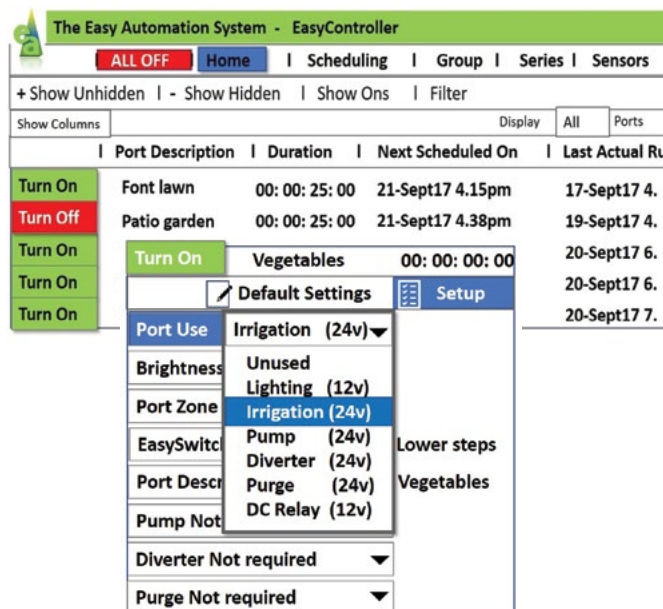

Old multi-wire systems can be adapted using the old wiring and then easily expanded with the Easy Automation single cable system.

Conventional “multi-wire” systems can be adapted for the superior

Easy Automation System
and then easily expanded.

Take Control!

Control with your PC, Laptop, Tablet or Smartphone - You choose what to control.

- Sprinklers, garden lights etc. all added when & wherever needed along the single cable (which can be branched)
- Control optional devices such as pumps, spot lights, fountains, fans and more...
- Software updating for enhancements and new devices
- Almost endless expansion

Simple intuitive screen displays for large or small layouts. Schedule using date/time or based on your local sun events (sunrise/sunset). e.g. turn on your lights 5 minutes before sunset.

For Effective Control

- Durations of days, hours, minutes and seconds.
- Manual turn on/off anytime from anywhere - one screen click.
- Simple or advanced calendar scheduling, e.g.
 - Every day, selected days, every nth day.
 - On and/or off using local sunrise, solar noon, sunset or set time.
 - Turn on driveway lights 15 minutes before sunset and turn off at 10:30pm every day.
 - Water roses every 3rd day at 1 hour after sunrise.
 - Delete a rainy day start with a single click
 - Change any schedule in seconds.
- Automatically turn on/off required pumps and valves as needed.
- Set up a “Series” to turn on two or more areas one after the other. e.g. water “Back lawn”.
- Set up a “Group” to control 2 or more areas simultaneously e.g. turn on “BBQ lights”.
- “Wet & Wait” cycling of on/off allows time for water to soak in to minimize runoff.
